

# 1.2.3 What is the function?

## Function Machines

### 1-53. FUNCTION MACHINES

A function works like a machine, as shown in the diagram below. A function is given a name that can be a letter, such as  $f$  or  $g$ . The notation  $f(x)$  represents the output when  $x$  is processed by the machine. (Note:  $f(x)$  is read, “ $f$  of  $x$ .”) When  $x$  is put into the machine,  $f(x)$ , the value of a function for a specific  $x$ -value, comes out. In this notation,  $f(x)$  replaces  $y$ .

Find the output for  $f(x) = x^2 - 1$  when the input is  $x = 4$ ; that is, find  $f(4)$ . Now find  $f(-1)$  and  $f(10)$ .

$$f(4) =$$

$$f(-1) =$$

$$f(10) =$$

**1-55.** Find the corresponding outputs or inputs for the following functions. If there is no possible output for the given input, explain why not.

a.

A diagram of a function machine. It is a rectangular box with an 'IN' slot on the left and an 'OUT' slot on the right. Inside the box is the equation  $f(x) = -2x + 4$ . An arrow labeled 'inputs' points to the 'IN' slot with the value  $x = -3$ . An arrow labeled 'outputs' points away from the 'OUT' slot with the value  $f(x) = ?$ .

b.

A diagram of a function machine. It is a rectangular box with an 'IN' slot on the left and an 'OUT' slot on the right. Inside the box is the equation  $f(x) = \sqrt{x + 3}$ . An arrow labeled 'inputs' points to the 'IN' slot with the value  $x = -2$ . An arrow labeled 'outputs' points away from the 'OUT' slot with the value  $f(x) = ?$ .

c.

A diagram of a function machine. It is a rectangular box with an 'IN' slot on the left and an 'OUT' slot on the right. Inside the box is the equation  $f(x) = x^2 - 1$ . An arrow labeled 'inputs' points to the 'IN' slot with the value  $x = ?$ . An arrow labeled 'outputs' points away from the 'OUT' slot with the value  $f(x) = 99$ .

# Can I predict the output?

## 1-62. THE COLA MACHINE

The cola machine at your school offers several types of soda. There are two buttons for your favorite drink, *Blast*, while the other drinks (*Slurp*, *Lemon Twister*, and *Diet Slurp*) each have one button.

- a. Describe the input and output of this soda machine.
- b. While buying a soda, Ms. Whitney pushed the button for *Lemon Twister* and got a can of *Lemon Twister*. Later she went back to the same machine, but this time pushing the *Lemon Twister* button got her a can of *Blast*. Is the machine functioning consistently? Why or why not?

- c. When Brandi pushed the top button for *Blast* she received a can of *Blast*. Her friend, Miguel, decided to be different and pushed the second button for *Blast*. He, too, received a can of *Blast*. Is the machine functioning consistently? Why or why not?
- d. When Lou pushed a button for *Slurp*, he received a can of *Lemon Twister*! Later, Tyeisha also pushed the *Slurp* button and received a can of *Lemon Twister*. Still later, Tyeisha noticed that everyone else who pushed the *Slurp* button received a *Lemon Twister*. Is the machine functioning consistently? Explain why or why not.

## 1-63. FUNCTIONS

In a relationship like the soda machine, we want the outcome to be consistent and predictable. When it is, we say that the machine is functioning properly.

- a. Examine each of the tables and graphs below that show different inputs and their outputs. Decide if the graph or table could be describing a soda machine that is “functioning properly.” Explain your reasoning.

i.

Button Number	1	1	2	4	2	3
Type of Candy	Stix	Stix	M&Ns	M&Ns	Duds	Duds

ii.

$x$	7	-2	0	4	9	-3	6
$f(x)$	6	-3	4	2	10	-3	0

iii.

$x$	3	-1	2	0	1	2	9
$y$	4	-5	9	7	4	-8	2

- b. A relationship between inputs and outputs is called a **function** if the inputs and outputs behave like a soda machine that is functioning properly. Discuss with your team what it means for a relationship between inputs and outputs to be a **function**.

- c. Examine each of the tables and graphs below. Compare the inputs and outputs and decide if the graph or table could be a **function**. Explain your reasoning.

i.

ii.

iii.

# What can go in? What can come out?

## Domain and Range

**1-73.** Now examine  $g(x)$  graphed at right.

a. Is  $g(x)$  a function? How can you tell?

b. Which  $x$ -values have points on the graph? That is, what is the domain of  $g(x)$ ?

c. What are the possible outputs for  $g(x)$ ? This is called the **range** of the function.

d. Ricky thinks the range of  $g(x)$  is:  $-1, 0, 1, 2$ , and  $3$ . Is he correct? Why or why not?

### 1-74. FINDING DOMAIN AND RANGE

The domain and range are good descriptors of a function because they help you know what numbers can go into and come out of a function.

Work with your team to describe in words the domain and range of each relationship below. Then state whether or not the relationship is also a function.

a.

b.

c.

d.

e.

f.
